Operational working suggestions  
for the **best** outcome

- Know your soil profile
- Pre ripping improves the mixing
- Level the big furrows after delving
- Spade at 20 – 50 degree angle across the ripping / delving
- Deeper spading needs slower speed

## Farmax Spaders

**Grocock Soil Improvement Pty Ltd**

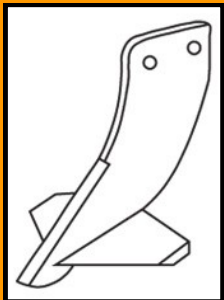

The Farmax spader is a digging machine which mixes soil thoroughly to a depth of 200 – 400mm incorporating clay, lime, stubble, green manure, fertilizer and / or trace elements.

[www.spaders.com.au](http://www.spaders.com.au)

With the introduction of the Farmax 300 and 400 a new generation of digging machines is created.

Bolt on spades allow easier replacement and the bolts give some shear pin protection.

Standard with PTO slip clutch and finger tyne roller.

Depending on the soil type or desired result, the Farmax 300 and 400 can be fitted with a rotovator cage roller or flat roller to produce a perfect seed bed.

### Technical data

Working width	3.00m	4.00m
Number spades	24	30
Weight	2940kg	3500kg
Power	160 – 200 Hp 119 – 149 kw	200 – 300 Hp 149 – 224 kw
Capacity	Up to 1.8 ha/h	Up to 2.4 ha/h
Working depth	200 - 400mm	200 - 400mm
PTO rpm	1000 rpm	1000 rpm
Finger tyne roller	400mm	400mm
